

Johnny's Belstar F1 Organic Broccoli

Organic hybrid for spring **and summer plantings**. Belstar has proven to be widely adapted, and has performed particularly well in Florida in the winter. Heads are medium green and domed with a medium-sized bead. Strong, stress tolerant plants with good side shoot production. For summer and fall harvest.

Broccoli prefers a well-drained, fertile soil high in organic matter, and a pH of 6.0–7.5 with a consistent supply of moisture throughout the growing season. Irrigate regularly for best results. Broccoli does not generally do well in hot weather. The best success is with spring and fall crops. Before flower buds open, cut center head. Ice as soon as possible. Harvest secondary side shoots regularly to encourage continued production.
