

Biscayne F1 Peppers

Avg. 6" x 2 1/4", cylindrical, lobed-end fruits famous for frying. Unripe color is pale green. Biscayne is the preferred Cubanelle and yields well in the North and South. About 65 days to harvest.

Peppers will thrive in well-drained, fertile soils with a pH of 6.5. Abundant phosphorus and calcium is needed for the best results. Transplant out after frost when the soil is warm and weather is settled. Ideal seedlings have buds, but no open flowers. Set plants 12-18" apart in rows 24-36" apart, or 2 rows on poly/paper mulch, 18" between plants. Water-in transplants using a high phosphorus solution.
