

Johnny's Goldkrone Organic Dill

Slower bolting variety with uniform, high yields of foliage. Prefers full sun. Space plants 4" apart in rows at least 12" apart. Prefers a rich, light soil, but will grow in most soils.

Foliage may be harvested once the plants have become established right up to flowering. Harvest seed heads just as the seeds begin to turn a golden brown. Foliage and seeds can both be dried and stored for future use.
