

# Johnny's Green Magic F1 Broccoli

High tolerance for heat. Heads are smooth, well domed, and very attractive. Extremely uniform in maturity. Similar to Gypsy, but with a smaller plant, smoother heads, and better uniformity. For summer harvest. Broccoli prefers a well-drained, fertile soil high in organic matter, and a pH of 6.0–7.5 with a consistent supply of moisture throughout the growing season. Irrigate regularly for best results.

Before flower buds open, cut center head. Hydrocool or ice as soon as possible. Harvest secondary side shoots regularly to encourage continued production.
