

Johnny's Nash's Green Organic Kale

Nash's Green kale is an on-farm selection from grower Nash Huber of Nash's Organic Produce in Sequim, WA. Tall plants have shown exceptional tolerance to cold, making this a great variety for overwintering. New variety for 2016!

Kale prefers a fertile, well-drained soil high in organic matter with a pH range of 6.0–7.5. Consistent moisture will produce the best quality leaves.

Beginning about 2 months after planting, harvest by clipping individual leaves. Kale is very hardy, and the eating quality will improve into the late fall with light frost. Late summer sown or planted collards can be wintered in cold frames or hoophouses, or in the open in mild regions, to extend the season. Protecting with row covers can extend the harvest period.
