

# Johnny's Snow Crown F1 Cauliflower

Extra early and adaptable – This hybrid shows unusual seedling vigor. Good-quality, medium-sized heads whether harvested in summer or fall. Good tolerance to moderate fall frost (25°-32°F/-4°-0°C).

Cauliflower prefers a well-drained, fertile soil high in organic matter, a pH of 6.0–7.5 with a consistent supply of moisture throughout the growing season. Irrigate regularly for best results. Cauliflower does not do well in hot weather; the best success is with spring and fall crops.

When small white heads become visible through leaves, gather the outer leaves over the head and tie with string or a large rubber band to preserve white curd color. Although tying is not necessary to grow cauliflower, the practice helps prevent yellowing of the curd due to exposure to sunlight and results in better head quality when curd develops during hot weather. Under fertility or moisture stress, it can show a purplish coloration on the undersides of the heads.
